Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                           Submitted (12-Aug-2000) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One (bases 1 to 172581)

STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nepeats are incirition using nepeatinases (n. Smit and F. Green, Genes and Region of Sequences.

(Nuc. Acids Res. 25:3389-3402) similarity are identified by BLAST EST and CDNA Sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice sites that maintained sequence identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    OUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base at unity are listed below. Description of the metrics can be found than.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        938. ..6929° ' .

```
consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as some as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3704 others

Center: Whitehead Institute/ MIT Center for Genome Research Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html * NoTE: This record contains 76 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
* arbitrary. Low pass sequence sampling is useful
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced
* will be sequenced to completion. In the event that
* will be sequenced to completion. Contact: sequence_submissions@genome.wi.mit.edu the record is updated, the accession number will be preserved.) bp 895 bp in length 862: contig of 862 bp in length 1851 1950: gap of 888 bp in length 1950: gap of 188 bp in length 1951 2817: con+'... of 100 bp contig of 867 bp in length P of 100 bp contig of 871 bp in length contig of 872 bp in length of 100 bp contig of 865 bp in length 12584 12683: gap of 100 bp 12684 13570: contig of 887 bp in length 13571 13570: gap of 100 bp 13671 14560: contig of 890 bp in length 14561 14660: gap of 100 bp 15536: contig of 876 bp in length bp in length of 100 bp contig of 886 bp in length of 100 bp contig of 871 bp in length 7: gap of 100 bp 10614: contig of 877 bp in length 10607: contig of 893 bp in length 11607: contig of 893 bp in length contig of 876 bp in length Center code: WIBR Web site: http://www-seq.wi.mit.edu 100 bp 100 bp contig of 895 contig of 860 Center clone name: 329_H_16 100 Center project name: 3788: con con 11607 6820: gap of 7680: con): gap of 8666: con 11707: gap of 12583: conf 3888: gap of 4760: co 4860: gap of 5725: cor 5825; gap of 6720; col 8766; gap of 9637: co 2917: 7780: 9737: 10714 11608 TITLE JOURNAL

It currently consists of 30 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 29 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones overlapping clones are noted at the beginning and end of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Direct Submission Submission Submitted (25-AUG-2000) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Jul 28, 2000 this sequence version replaced gi:9438826. NOTE: This is a "working draft' sequence. It currently consists of 19 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Runs of N are used to separate the reads and the order in which they appear is completely rarbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Contact: sequence_submissions@genome.wi.mit.edu ------ project Information Center project name: L5499

                                                                                                                                                                                                                                                                                                                                       * NOTE: This is a 'working draft' sequence. It currently consists of 30 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence * as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2540: contig of 2540 bp in length
